

New Vass Mega-Stud Edition

In addition to Vass's usual high quality studded sole options, Vass have announced the introduction of their new Vass Mega-Stud. Not only does the sole offer more studs but the Vass Mega-Studs are longer and protrude a good 4mm from the chunky cleated sole. These are combined with a selection of standard Vass studs which are placed specific areas of the sole create optimum grip you can rely on!

Both the original Vass Studs and the new Vass Mega-Studs boast a Tough Tungsten Core ensuring a spike like grip coupled with hard wearing properties. This provides even more grip on slimy/mossy rock and stony surfaces. If you are fishing steeper grassy banks the Vass Mega-Stud provides extra grip by clawing into the ground (similar concept to rugby boots). The base of the studs are machined deep into the sole and flanged ensuring that they don't drive through your foot over time. This also helps distribute your weight more evenly over the sole of your foot. Vass Mega-Stud edition is now available on all Vass products (including waders) using the new Vass Boots.
